

RAJA SATYA VARDHANA REDDY THIPPAREDDY

AI/ML Developer | Python Developer | Applied AI Analyst | LLM Evaluator | Software Developer

Ottawa, Ontario, Canada | Open Work Permit | rajasatyavardhan@gmail.com | github.com/rajasatyavardhan |
linkedin.com/in/t-raja-satya-varadhan-reddy-05b1b8191

PROFILE

AI/ML and Python-focused developer with hands-on experience across LLM evaluation, healthcare AI simulation, multimodal AI assistants, big-data prediction, NLP, computer vision, IoT systems, and real client-style web automation. Practical builder who connects models, APIs, data workflows, sensors, dashboards, and user-facing interfaces into systems that can be demonstrated and improved.

TECHNICAL SKILLS

Programming	Python, JavaScript, TypeScript, SQL, Git/GitHub, REST APIs
AI / ML	scikit-learn, TensorFlow/Keras, PyTorch, Hugging Face, CNNs, LSTMs, Transformers, model evaluation
LLM / GenAI	LLM evaluation, hallucination detection, rubric scoring, prompt evaluation, GPT APIs, Ollama, RAG concepts
Data / Big Data	pandas, NumPy, PySpark, HDFS, Elasticsearch, Kibana, Matplotlib, Seaborn
Computer Vision / IoT	OpenCV, DeepFace, MediaPipe, dlib, ESP32, ultrasonic sensors, Blynk IoT
Web / Deployment	React, Vite, Tailwind CSS, HTML/CSS/JS, Vercel, forms, WhatsApp lead workflows, SEO basics

WORK EXPERIENCE

AI Annotator / LLM Evaluator - Outlier AI

Freelance Contract, Remote | Nov 2025 - Present

- Evaluated and ranked LLM outputs across varied prompt types for factual accuracy, reasoning quality, safety, tone, clarity, and instruction-following.
- Detected hallucinations, factual inconsistencies, policy issues, weak reasoning, and missed constraints using structured rubrics and detailed feedback.
- Performed multimodal annotation and recurring-pattern logging to support model-quality analysis and chatbot performance improvement.

Solo Builder - The Dansvilla Studio Website & Lead Workflow

Ottawa client-style project | 2026

- Solo-built and iterated a live website for an Ottawa dance studio with schedules, pricing, registration, rentals, reviews, gallery, contact paths, and mobile-friendly presentation.
- Implemented enquiry flow where the form submits lead details and continues into WhatsApp for faster response and business follow-up.
- Worked from real business requirements and feedback while shipping the project in roughly 15 focused hours across 15 days.

Crew Trainer - Tim Hortons

Ottawa, Ontario | Jan 2024 - Aug 2025

- Trained new team members on operational workflows, service standards, quality control, and customer-facing procedures in a high-volume environment.
- Built transferable strengths in communication, prioritization, consistency, adaptability, and problem solving under pressure.

Customer Operations - Tahini's and Biryaniwalla Ottawa

Ontario | Nov 2025 - Present

- Handled front-of-house service, takeout order accuracy, packaging, prep coordination, sanitation, and customer issue resolution in fast-paced restaurant settings.
- Demonstrated reliability, solo-operation capability, attention to detail, and workflow discipline while continuing AI/ML portfolio development.

SELECTED AI / SOFTWARE PROJECTS

MERLIN - Medical Emergency Routing and Live Intelligence Network

Python, pandas, NumPy, PuLP, routing logic, simulation, Matplotlib, Seaborn

- Built a healthcare AI simulation for emergency dispatch, severity prediction, routing, resource decision support, and safety validation.
- Positioned responsibly as simulation/research support for rural and remote emergency response planning, not a live clinical system.

AR Glasses AI Assistant - Humber Capstone

Python, Flutter, Whisper, OpenAI Vision, ChatGPT, Google Vision/Gemini concepts

- Designed a multimodal assistant concept for Brilliant Labs Frame AR glasses using voice input, image understanding, and LLM-generated responses.
- Combined speech, vision, and LLM workflows into an architecture for hands-free contextual assistance.

Predicting Flight Delays at Scale

PySpark, Random Forest, HDFS, GCP VM, Logstash, Elasticsearch, Kibana

- Built a big-data ML pipeline using 60M+ U.S. flight records with dashboards and reported academic metrics for model evaluation.
- Used Spark/cloud analytics and Kibana reporting to connect prediction outputs with operational decision-making.

Yelp Sentiment Analysis with LSTM + DistilBERT

Python, TensorFlow/Keras, PyTorch, Hugging Face, scikit-learn

- Compared LSTM and DistilBERT for Yelp review sentiment classification with preprocessing, training outputs, confusion matrices, and reports.

Smart Attendance with Face Recognition + Blink Liveness

Python, OpenCV, DeepFace, MediaPipe, dlib

- Built an attendance prototype combining face recognition with blink-based liveness detection to reduce simple photo-spoofing risk.

Visitor Monitoring & Smart Door System

ESP32, ultrasonic sensors, servo motor, Blynk IoT, Arduino C/C++

- Built an IoT smart access prototype for visitor counting, remote monitoring, threshold notification, and gate-control behavior.

EDUCATION

Graduate Certificate - Artificial Intelligence with Machine Learning

Humber Polytechnic | 2025

Graduate Certificate - IoT with Machine Learning

Sheridan College | 2024

Bachelor of Technology - Information Technology

Vellore Institute of Technology | 2023

ADDITIONAL

Open Work Permit - eligible for full-time work in Canada. Strong interests: Applied AI, LLM evaluation, Python systems, healthcare AI, multimodal assistants, NLP, computer vision, IoT/edge systems, and practical software development.
