

Raja Satya Vardhana Reddy Thippareddy

Ottawa, ON, Canada | Open Work Permit | +1 647-482-4254 | rajasatyavardhan@gmail.com

LinkedIn: linkedin.com/in/t-raja-satya-varadhan-reddy-05b1b8191 | GitHub: github.com/rajasatyavardhan

AI/ML Developer | Applied AI Analyst | Python Developer

AI/ML Developer | Applied AI Analyst | Python Developer

Early-career AI/ML and Python-focused developer with hands-on work across LLM evaluation, healthcare AI simulation, multimodal assistants, NLP, computer vision, big-data ML, IoT systems, and real business automation. Strongest in building practical prototypes, evaluating AI behavior, debugging real workflows, and turning project evidence into clear technical outcomes.

Core Skills

Languages: Python, SQL, JavaScript, TypeScript, HTML, CSS

AI/ML: scikit-learn, PyTorch, TensorFlow/Keras, Hugging Face Transformers, DistilBERT, LSTM, CNN/RNN, Random Forest, XGBoost, model evaluation, classification, regression, EDA

LLM & Applied AI: LLM output evaluation, hallucination detection, rubric scoring, prompt analysis, OpenAI APIs, GPT workflows, Whisper, Ollama/local LLMs, RAG concepts, embeddings, quantization concepts

Computer Vision: OpenCV, DeepFace, MediaPipe, dlib, face recognition, blink/liveness detection, transfer learning, image preprocessing

Data & Cloud: pandas, NumPy, Matplotlib, Seaborn, PySpark, HDFS, GCP VM, Elasticsearch, Kibana, Logstash

IoT & Systems: ESP32, sensors, Blynk, edge AI concepts, REST APIs, Git/GitHub, Vercel, workflow automation

Professional Experience

AI Annotator / LLM Evaluator - Outlier AI

Remote, Canada | Nov 2025 - Present

- Evaluate LLM responses across varied prompt types for factuality, instruction-following, reasoning quality, tone, clarity, and safety.
- Identify hallucinations, factual inconsistencies, policy issues, and weak reasoning patterns using structured evaluation rubrics.
- Convert qualitative model behavior into clear feedback that supports AI quality improvement and chatbot performance analysis.
- Perform multimodal annotation tasks including audio transcription, labeling, and structured quality review.

Applied Software Builder - The Dansvilla Studio Website & Growth Workflow

Ottawa, Canada | 2026

- Solo-built and improved a live website and inquiry workflow for an Ottawa dance studio in about 15 focused hours across 15 days.
- Implemented responsive sections for classes, pricing, registration, rentals, reviews, gallery, and contact using frontend development and deployment workflows.
- Connected inquiry submission with WhatsApp handoff to improve lead response speed and reduce friction for mobile users.

Crew Trainer - Tim Hortons

Ontario, Canada | Jan 2024 - Aug 2025

- Trained and supported team members in a fast-paced customer-service environment while maintaining quality, speed, and consistency.
- Strengthened communication, reliability, shift coordination, and customer-handling skills useful for cross-functional technical teams.

Selected Projects

MERLIN - Medical Emergency Routing and Live Intelligence Network

Healthcare AI / Emergency Response Simulation | In progress advanced prototype

- Built a synthetic simulation and AI decision-support research prototype for rural and remote emergency dispatch planning.
- Designed logic for severity modeling, dispatch strategy comparison, ambulance/helicopter routing, safety validation, travel constraints, availability, and result visualization.
- Uses Python, pandas, NumPy, scikit-learn-style ML logic, XGBoost, simulation, routing logic, optimization concepts, Matplotlib, and Seaborn.
- Presented responsibly as simulation and research support, not a live clinical or operational dispatch system.

AR Glasses AI Assistant - Humber Capstone

Multimodal AI / Augmented Reality | Advanced prototype

- Designed an AI assistant concept for Brilliant Labs Frame AR glasses using voice input, image understanding, and LLM-generated responses.
- Connected speech, camera/image analysis, backend API design, and response generation into a hands-free assistant workflow.
- Used Python, Flutter, Whisper, OpenAI Vision, ChatGPT, Google Vision/Gemini concepts, and AR hardware design thinking.

Predicting Flight Delays at Scale

Big Data ML / Cloud Analytics | Completed academic project

- Built a large-scale flight delay prediction pipeline using more than 60 million U.S. flight records.
- Combined PySpark, cloud processing, Random Forest modeling, HDFS, GCP VM, Logstash, Elasticsearch, and Kibana dashboards.
- Reported academic project metrics: accuracy around 99.27%, F1 around 99.28%, and ROC-AUC around 99.79%; not presented as production validation.

Yelp Sentiment Analysis with LSTM + DistilBERT

NLP / Deep Learning | Completed academic project

- Compared LSTM and DistilBERT models for classifying Yelp reviews into positive, neutral, and negative sentiment.
- Demonstrated text preprocessing, sequence modeling, transformer fine-tuning, confusion matrices, classification reports, and training analysis.
- DistilBERT achieved stronger reported project performance, around 73.4% accuracy and 73.6% F1.

Smart Attendance with Face Recognition + Blink Liveness

Computer Vision / Biometrics | Completed prototype

- Built an attendance prototype combining face recognition with blink-based liveness detection to reduce simple photo-spoofing risk.
- Used OpenCV, DeepFace, MediaPipe, dlib, facial landmarks, eye-aspect-ratio logic, Kaggle LFW dataset, and CSV logging.

Additional Technical Projects

- **Synthetic Chest X-ray Augmentation with GANs:** PyTorch GAN pipeline for medical image augmentation research using COVIDx CXR-2, SSIM, PSNR, and FID-style evaluation.
- **Telugu-English Hate Speech Detection:** NLP project for code-mixed social media safety using preprocessing, n-grams, ML classifiers, and a manually collected CSV dataset.
- **Offline LLM Deployment:** Local LLM exploration using Ollama, offline inference, deployment constraints, and quantization concepts.
- **Visitor Monitoring & Smart Door System:** IoT prototype using ESP32, ultrasonic sensors, Blynk, sensor calibration, and smart access-control logic.
- **Sign Language Recognition System:** B.Tech capstone exploring video-based sign recognition using CNN/RNN/LSTM and transfer-learning concepts for accessibility AI.

Education

Graduate Certificate, Artificial Intelligence with Machine Learning - Humber Polytechnic, Canada | Jan 2025 - Nov 2025

Graduate Certificate, Internet of Things with Machine Learning - Sheridan College, Canada | Jan 2024 - Oct 2024

B.Tech, Information Technology - Vellore Institute of Technology, India | 2019 - 2023

Resume Positioning

Best fit roles: AI Developer, Machine Learning Developer, Applied AI Analyst, LLM Evaluation Analyst, Python Developer, Data/AI Analyst, Software Developer.
